

**REBEL  
AWD**

2024 Specification

# Introducing **RP OVERLAND**

Since 2014, we have been growing the RP brand, with the simple goal of offering luxury mobile living that puts the customer's needs and experience first.

This journey has taken many forms and has been driven by our irrepressible enthusiasm to harness innovation and technology with a creative flair. Our design and build is all about producing an RP experience for owners that truly sets us apart from the rest of the market.

## **Off the beaten track**

In 2023 we re-focused our business in two distinct directions, both unmistakably RP but serving a different type of customer. RP Motorhomes continues with a RWD Rebel. This is a single offering featuring a curated selection of the most popular and useful upgrades. It suits those who love the grand tour and regularly find themselves at fully connected sites.

RP OVERLAND has diverged off the beaten track with a focus on highly equipped and well specified AWD models. The 4,100kg GVW Rebel AWD will suit the more adventurous explorer who wants to take the road less travelled. RP OVERLAND models are more sure footed and resilient, designed to thrive without requiring fully connected sites.

## **Celebrating British manufacturing skills**

We are now based in the town of Yeadon, West Yorkshire, where we have proudly invested in harnessing British manufacturing expertise and have built a fantastic team of dedicated technicians who take on all aspects of the transformation process.

From bespoke 3-D printed parts, fibreglass fabricated panels, in-house designed and built leather furnishings, and custom-made electrical systems, to name a few; the high quality demands of our creations have meant more and more parts are now produced directly on site and you'll only find market leading products in an RP creation.

## **Fit for purpose**

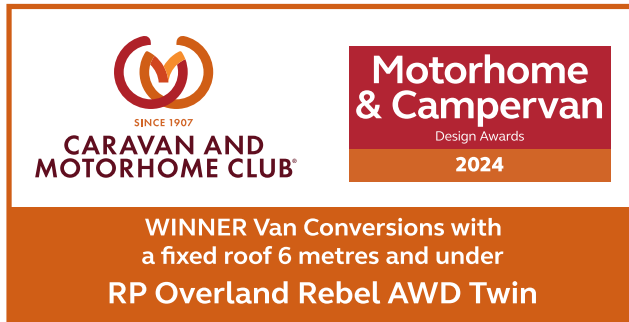

We pride ourselves on ensuring every motorhome we produce is fit for purpose, meeting the specific needs and expectations of each customer. As such, we take time to build great relationships with our customers, helping them add their personality to the many finishing touches of every build.

## **Innovation, creativity and attention to detail**

Our RP OVERLAND range don't just look stunning from the outside and inside, we like to impress at every level of scrutiny. We're all about thoughtful, imaginative design that is guided by functional ergonomics coupled with a generous level of luxury. Experiencing is believing.

Under the skin of our unique Rebel AWD you will therefore find many creative and industry leading uses of technology and craftsmanship. We take genuine pride in every stage of the conversion process as we craft luxury overland vehicles for the most discerning customers.

# And the winner is ... RP Motorhomes

It has been a pleasure to receive recognition from the Caravan and Motorhome Club's Design Awards. Winning the top design award for five years running is no small thing and is a particular point of pride for us at RP.

Our most recent award in 2024 was for the model in this brochure the Overland AWD version of the Rebel. We were voted WINNER in the category 'Van Conversions with a fixed roof under 6m'.

For 2023 the Rebel's bigger sibling the Rebellion took the top spot for 'Van Conversion with a fixed roof over 6 meters'. For 2022 we were voted the WINNER for our AWD Exclusive Rebel Twin which was our top specification 4x4 model at the time.

For 2021 we were awarded the only 5 Star rating for a Fixed Roof Van Conversion under 6 metres. In 2020 we were voted the WINNER in the category 'Van Conversions over £65,000'.

We are so delighted with these achievements and thrilled to be continually recognised by the Caravan and Motorhome Club. We take great pride in our design and build process, continually striving to provide innovation and exceptional attention to detail. This is only possible because of the fantastic, professional and hard-working team who make RP Motorhomes what it is today.

## Innovation and Technology Exclusives

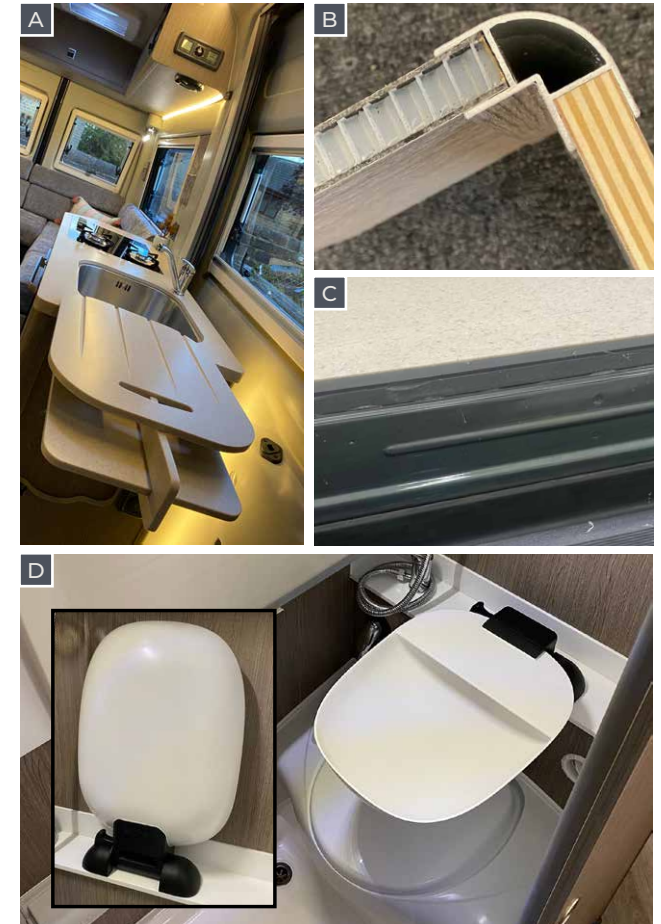

At RP we constantly strive to innovate and improve the way we build and manufacture our leisure vehicles. We start with the best base vehicle available and partner this with a design and specification from the best technology the industry has to offer.

Our focus has always been the end user experience, so our innovation leads directly to improved ergonomics, efficiencies and experience for our customers.

You'll find bespoke (A) lightweight plastic panels with beautiful tactile Corian® work-surfaces coupled with soft close drawers and overhead cupboards. All handles are self-latching and flush fit providing secure storage and clean lines at every turn.

Weight saving comes from the recycled plastic honeycomb sandwich (B) that fills much of our furniture frames. Insulation made from XPS extruded polystyrene (C) is used underfloor in all our motorhomes. It provides the exceptional thermal performance, high compressive strength, and low water absorption for an outstanding floor insulation.

For reliable electrical supply we use solutions from the industry leader Victron Energy. Their Lithium

batteries, charging and inverter technology provide the electrical heart of every RP model. We design our systems to provide clarity and simplicity to the user whilst harnessing all the benefits of this advanced technology.

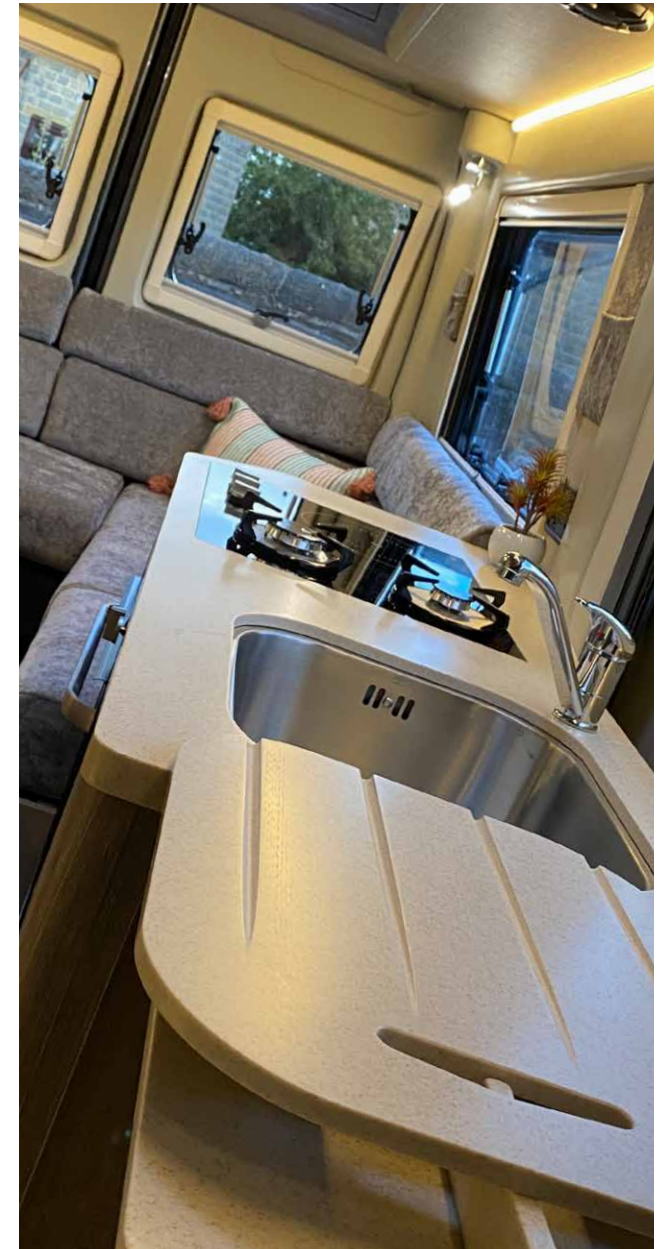

The day to day living experience is enhanced through thoughtful design and high quality specification. The beautiful and ergonomic design in our fold up Corian® bathroom sink is an excellent example of all that we strive to achieve. (D)

# The RP Aesthetic

The luxury is in the details and the moment you reach out to use any feature on an RP model you'll know you've come home. A perfectly crafted high quality product that has been designed with the end user in mind.

Beautiful and practical Corian® worksurfaces throughout. Soft close drawers and overhead cabinets with automatically retracting latches. Warm LED lighting, charging points, storage at every turn and the highest quality components under the skin. There's no flimsy feeling interaction as you live, work and play in the Rebel, what you see is beautiful, useful and built to last. RP OVERLAND offer an extensive vehicle specification, together with a fully featured standard habitation specification. An exclusive selection of optional extras allows for personal customisation tailored to the individual.

# Building excellence on the class leading Mercedes-Benz Sprinter

## A base vehicle without compromise

The Rebel AWD demands the very best possible foundation upon which to build. Why would you compromise on the driving force behind what is a premium product? We didn't and found what we were looking for in the Mercedes-Benz Sprinter.

With an enhanced cabin environment, the highest standard specification of any large van, the Sprinter is a perfect fit. Including a wide range of sixth sense safety features, every Sprinter is also powered by Mercedes PRO Connect providing enhanced security, efficiency and a three year warranty.

## Efficiency and eco credentials

The base vehicle of choice for the Rebel AWD is the AWD 419 L2H2 with a high roof and 5.9m length. It includes the responsive 190bhp 2.0 Litre 2-stage turbocharged 4-cylinder diesel with reduced engine friction and improved fuel consumption.

As standard we couple the 419 engine with the smooth new 9G-TRONIC auto gearbox. This improves fuel economy, lowers CO<sub>2</sub> emissions and makes for an effortless driving experience.

The stringent Euro 6d / Euro VI emissions standard has been met with innovative SCR (Selective Catalytic Reduction) technology that passes the exhaust gas through a catalytic converter, adding water-based AdBlue® to further reduce the Sprinter's emissions.

## Specification excellence

The Rebel base vehicle starts with the Mercedes Sprinter top level of trim and includes an extensive range of enhancements to safety and comfort that are tailored to the off-grid motorhome experience.

The specification includes comprehensive safety and comfort upgrades that provide the ultimate RP owners' experience. You'll get the 10" MBUX entertainment unit and Black Rhino Warlord alloys.

# Rebel AWD standard Sprinter specification

## Rebel AWD specification

The first and most significant feature of every vehicle in the RP OVERLAND range is the new torque-on demand (AWD) all-wheel drive system.

The new drive system is partially derived from the current Mercedes-Benz Cars modular system. Unlike the previous engageable system, which fed 35 percent of the torque to the front and 65 percent to the rear axle in 4x4 mode, this can distribute the drive torques fully variably between the front and rear axle depending on the situation and without any input from the driver (Torque-on-demand).

## Torque-on-demand system

Fully variable torque distribution is ensured by an electronically controlled multiplate clutch integrated into the transfer case. If the multiplate clutch is disengaged in normal driving operation, the rear axle drives the vehicle entirely. With the multiplate clutch engaged, the front axle comes into play. This ensures high traction and effortless handling. A further advantage over the previous engageable all-wheel drive: in addition to the higher comfort through the automatic torque distribution the new system works much more quietly.

As soon as the driving situation calls for it, the drive torque is fed to the front axle. If this is no longer needed – for instance in powerful braking manoeuvres with ABS intervention – the front drive-train is switched off and the torque is reduced to zero. If there is a risk of understeering or oversteering under load, the torque is distributed so that the vehicle is stabilised again.

AWD vehicles benefit from a higher ground clearance and fording depth, and are able to master greater breakover, approach and departure angles.

The added confidence on slippery and steep surfaces will mean you're never stuck for a finding a new adventure or getting yourself out of a tricky situation.

# Rebel AWD standard Sprinter specification

## Confidence Boosting

There's few things more worrying in a large, heavy vehicle like a motorhome than getting it stuck. Loose stone, snowfall, overnight rain turning the site to a mud bath won't trouble you. It's hard to express just how surreal it feels to drive the Rebel AWD in conditions like this. It grips, it turns, it stops and yet what you see is telling you that you had better call the rescue services. In the Rebel AWD you are the rescue services.

## New Destinations

The Rebel AWD has been designed to be a supremely comfortable and capable motorhome. Now coupled with the extensive off-grid capability and including upgrades like the awning and media pack, you'll be untethered from relying on the services of sites and free to roam in comfort like never before.

You'll find new destinations are possible and new adventures await.

# Rebel AWD standard Sprinter specification

## Rebel AWD Specification

The Sprinter has a truly impressive and advanced specification, helping you get where you're going safely, efficiently and in typically Mercedes-Benz comfort and style. Add to this the top Sprinter specification trim level with a range of exclusive RP selections and your starting package is a feature rich and beautiful machine.

## Engine and Gearbox upgrade

Sprinter 419 190bhp 2.0 Litre 2-stage turbocharged 4-cylinder diesel with 9G-TRONIC Auto

## Safety, security and connectivity

- Dual Air-bags
- Electric Parking brake
- Keyless start
- Active Brake ASSIST
- Adaptive ESP®
- Additional USB-C
- Attention ASSIST
- Crosswind ASSIST
- Blind Spot ASSIST
- Navigation, Live Traffic and 3 yrs of free map updates
- Instrument cluster with colour display
- Electrically heated, adjustable and foldable mirrors

- Wet wiper system
- Highbeam ASSIST
- Partial LED rear lights
- Fog lamps with cornering light function
- Parking package with 360-degree camera
- Cruise control/Speed limiter
- Double locks
- MBUX multimedia system with 10.25-inch touch screen, USB-C and Bluetooth® interface, Wi-Fi hotspot, Apple CarPlay/Android Auto and a DAB radio
- Charging Package, dashboard (Two 5v USB-C sockets and 12v socket)
- Multi-button keys

# Rebel AWD standard Sprinter specification

## Interior

- Heated seat for driver and co-driver
- Driver and co-driver lumbar support
- Leather multifunction steering wheel
- Adjustable steering column for height and rake of steering wheel
- Driver and co-driver armrests
- Comfort overhead control panel
- Hinged lid storage compartment
- Driver and co-driver comfort seats
- TEMPMATIC semi-automatic climate control system

## Exterior

- Selection of flat paint colours
- Headlight assistant
- Heat-insulating glass
- Heated windscreen
- 93L fuel tank
- Direction indicators on front wing
- Set of 5 Black Rhino Warlord alloys in matt gunmetal
- BF Goodrich All Terrain Tyres LT245/70R17 119/116S
- Electrically operated sliding left-side door
- Front and rear mud flaps
- Rear door step
- Radiator grill frame in body colour

# RP standard habitation specification

## Comprehensive, luxurious and user friendly

After years of adjusting and adapting specifications for our customers, we are excited to present a more focused sweet spot that offers the best selection of essentials and upgrades that we believe will provide you with the most valued specification.

There is a mixture here of what we have traditionally offered as standard that now includes some of the most popular upgrades.

This has helped to provide the most cost-effective value on what has become the essential wish list of customer upgrades.

## Kitchen

Clean smooth lines of Corian® provide the initial hint of the luxury that you'll find throughout the kitchen. The undermounted stainless steel sink with a perfectly cut flush insert makes the most of the space.

Clever use of an overhang and a flip-up extending surface provides a surprising amount of useful worktop. Soft close drawers and overhead cupboards with self-latching flush fit handles keep storage options secure. Easy clean low profile induction hob and mirrored high level fridge complete your well appointed kitchen.

- Dual gas/induction hob
- Duplex gas oven and grill
- Eye level 84 litre compressor fridge with freezer
- Undermounted sink with mono mixer chrome tap
- DuPont Corian® worktops (neutral concrete or weathered concrete as standard with bespoke option)
- Blum pull out, soft close drawers with self-latching flush handles

# RP standard habitation specification

## Front Lounge

Making the most of the swivel comfort seats in the front cab is a versatile cockpit table that pivots to provide the perfect resting place for your glass. Reading lights and fitted cab blinds make this a snug spot to unwind in the evening.

Two new additions now come as standard. The elegant Remis cab blinds are designed to fit perfectly into the windscreen and front cab windows; they make securing and ensuring privacy a simple quick pleasure. The other hugely practical essential is the built in fly-screen to the side door. As a regular customer upgrade we now include this as standard.

- Driver & co-drivers comfort swivel chairs
- Versatile cockpit table
- Dimmable reading lights
- Remis cab blinds (2020 edition)
- Fly-screen to side door.
- Micro Heki opening roof light
- Combined smoke & Carbon Monoxide alarm
- Thermal grade insulation to floor

## Bathroom

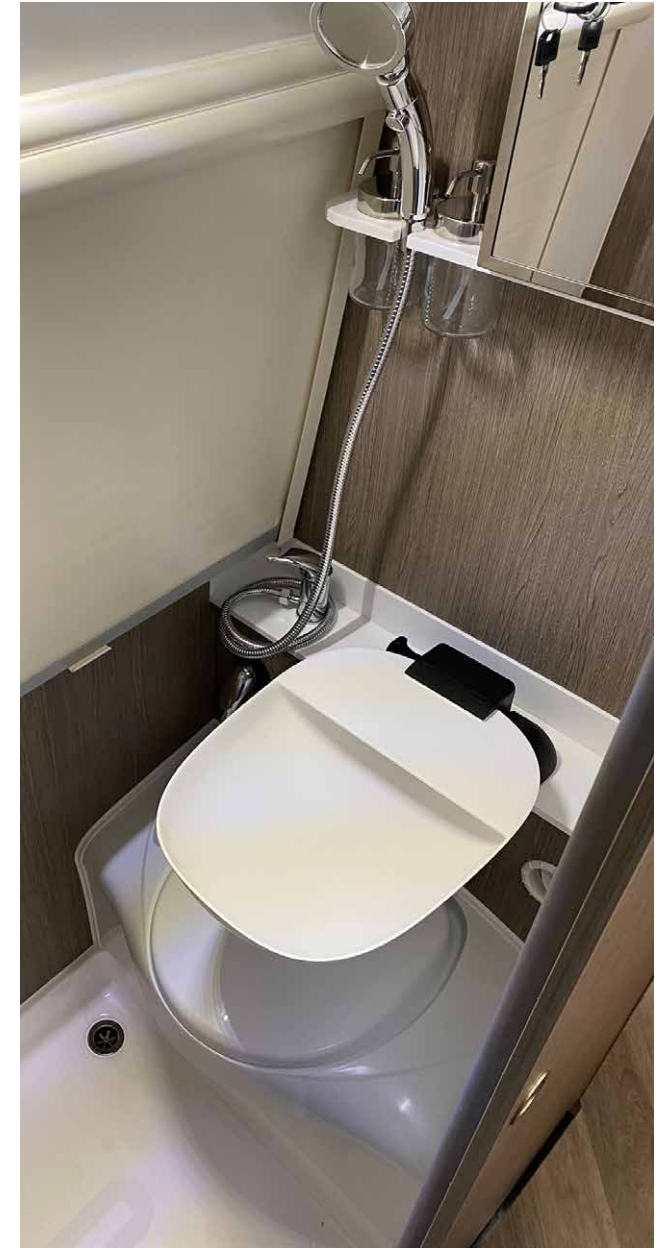

The toilet, shower and sink share a space, providing an elegant and functional bathroom. Our exclusive fold down sink is a beautiful curvaceous and clever design for use only when needed, and otherwise folds neatly above the toilet. A waterproof toilet roll holder and the mirrored cabinet provide the all important storage for those everyday items you need close to hand. When showering, a waterproof blind cover protects the window and the bi-fold shower door means no sticky shower curtain. The smooth lines of the GRP shower tray make quick work of any clean up.

- Bi-fold shower screen
- GRP durable shower tray & chrome mixer shower
- 19 litre cassette toilet with waterproof toilet roll holder
- Corian® space-saving folding sink
- Stainless steel lockable mirrored cabinet & LED light
- Hanging rail

## Plumbing & Heating

Trusted, industry mainstay Truma provide the essential components to our heating systems with optional cooling options also available. Extending the season of use the grey water tank is fully winterised. Further details on the technology behind these systems can be found on page 13.

- 84 litre fresh / 82 litre grey water tanks
- 12V water pump
- Electronic dump valves to drain fresh water and grey water tanks from switch inside the vehicle
- Truma Combi D6E diesel heating system
- Truma iNet X touchscreen panel
- 15 Litre underslung LPG tank
- Truma isolation gas valve
- Winterised grey water tank
- Pure drinking water filter
- Gas level indicator
- Fire extinguisher

# RP standard habitation specification

Twin configuration shown with optional extra cushion

## Rear Lounge / Bedroom

The rear lounge comes as standard with the twin sofa configuration, with the U layout available as an optional upgrade. Both convert easily into a double bed and both provide additional under seat storage.

You have an excellent view from windows on all sides that include built in fly-screens and blinds. LED ceiling and dimmable reading lights provide the necessary illumination at night. The included media package provides a wall mounted 21.5" Full HD Wi-Fi Smart TV with omni-directional aerial and signal booster.

A popular upgrade that now comes as standard is the MaxxAir Maxxfan Deluxe roof fan/light, allowing for fresh air, fly-screened and rain protected powered venting.

- Multi configuration sofa/bed(s) in U or Twin layout
- 1910mm and 1780mm bed lengths, 660mm wide as twin beds and 1720 as a double.
- Avtex W215TS 21.5" Smart TV + Maxview Gazelle Pro booster
- High level storage cupboards
- Under-bed storage
- Wardrobe & drawers
- Locking Safe
- LED ceiling & dimmable reading lights
- Multi configuration tables
- Heating vent outlets
- Windows fitted with fly-screens and blinds
- MaxxAir Maxxfan Deluxe roof fan / light

## Electrical

The electrical system has seen the biggest overhaul for our new specification for 2024. This is the critical energy source for nearly all of the day to day appliances that make motorhome living so enjoyable. It is therefore crucial to provide sufficient capacity together with reliability and sustainability.

# RP standard habitation specification

This starts with upgraded battery capacity coupled with a 105W LightSolar panel and the Victron 3,000VA Multiplus inverter. You now have the essential components in place for extended periods without site connected living. Upgrading further with additional solar panels, or larger batteries is also possible. See page 14 for more information on the technology for off-grid living.

Security also gets a massive upgrade with the UK's leading designer and manufacturer of vehicle security and tracking/telematics systems now fitted as standard to all Rebels.

The Scorpion Defender S5+ is a vehicle security system that combines a tracker and an alarm. It is designed to protect your vehicle against theft, tampering, and unauthorized movement. Thatcham approved at the highest level, ensures it meets the highest standards of quality and performance.

Features include Automatic Driver Recognition tags, 24/7 theft monitoring with remote immobilisation, battery backup siren, unique tracking technology to defeat GPS/GSM signal jammers, dedicated monitoring mobile app and more.

Since this is a 24hr monitored system, there is a subscription charge with annual options.

- Scorpion Defender S5+ Immobiliser/Tracker
- 2 x 160 Amp Victron lithium battery
- 2 x 30 Amp DC/DC charger
- 3,000VA Victron Multiplus inverter/charger
- NDS LightSolar panel 105W
- Cerbo GX touchscreen control system
- 240V RCD mini consumer unit
- 12 Volt automatic battery charger
- LED 12 Volt warm white dimmable lights
- Electronic water gauges (fresh and grey water)
- Electronic internal/external temperature gauges
- Electronic gas isolation switch
- 20m UK mains hook-up cable

## Vehicle Exterior

The Rebel now comes with multiple additions to provide the maximum flexibility for use. Additional external power, BBQ and shower sockets make outdoor leisure use simple. A Thule 3.5m manual awning, LED strip light and electric side step connect indoors to outdoors with ease.

- Fresh water fill point
- Electric hook-up point
- Gas fill point
- Waste water drain points electronically operated from an internal switch
- Table tripod and leg for outside use of tables
- External power socket
- External gas BBQ socket
- External shower connection point
- Thule 3.5m manual awning
- LED awning strip light
- Thule electric step to side door

# Rebel innovation and technology

## Technology that works for you

The latest technology is at the heart of every RP model and you'll find many new and innovative solutions for power, light, heat and sanitation.

Our design brings a sophisticated simplicity that makes the daily practicalities of living and owning a motorhome easy, effortless and worry free.

The Victron Lithium battery powering your motorhome is managed by matched Victron electronic systems that optimise its charging and use as a 230V power source.

Simple on/off controls provide an obvious way to select how you want to use power and the automated systems do the rest. Bluetooth connected smartphone apps, provide a level of information and control to satisfy anyone wanting to understand what's happening behind the scenes.

## Keeping cool

Refrigeration is provided from an eye level 84 litre compressor fridge. Designed with one touch control, efficient electric power and mirrored for your convenience.

## No more guessing

A dedicated and clear LCD display provides critical information at your fingertips.

- Fresh and waste water percentage levels
- Gas is isolated by a single electronic control switch
- Battery run-time on current use
- Intelligent charging modes optimise battery life

## Combi simplicity

The Truma Combi D6E heats your vehicle and water at the same time. Enjoy twice the comfort from the latest heating technology that runs on Diesel or electric when you're connected to a site supply.

The Truma heating or optional cooling systems are controlled via the Truma iNet X panel and smartphone app. The 4.3" colour touchscreen is simplicity itself and provides all the control and information you need at your fingertips.

Leisure needs to be pleasure, so harnessing the latest technology to bring effortless motorhome living is in the DNA of all RP Motorhomes.

# Victron technology for electric independence

## 240 Volt supply with no hook up

Getting connected to a hook-up supply on your chosen site makes everything easier. But what if you could have that mains supply without a hook up? This is what the Rebel AWD is designed for from the ground up.

### *Victron to the rescue*

Our supplier of choice for the RP OVERLAND electrical system is Victron. They are class leaders in this technology and provide the reliability and innovation that are the hallmark of all we strive to create.

At the heart of the system is the Lithium battery. This must reliably charge, store and supply your energy needs and be robust and straightforward to manage. The Rebel AWD comes as standard with two 160 Amp Leisure batteries that you can upgrade to 200 Amp should you require it.

Victron Lithium battery technology provides exceptional control and diagnostic feedback to leverage maximum performance, reliability and longevity.

The dual 30 Amp DC/DC chargers make use of the alternator and starter battery in the vehicle to balance storage and charge when driving. This will all run effortlessly behind the scenes but can be monitored and adjusted via a Smartphone bluetooth App.

## MultiPlus intelligent management

The technology that makes off grid living a reality is an inverter. It converts the 12 Volt leisure battery supply to a familiar domestic 240 Volt mains supply.

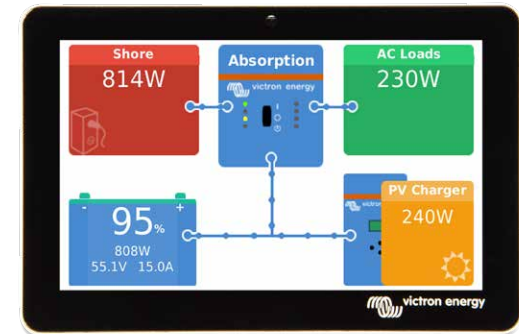

The MultiPlus system is more than just an inverter and would be better described as the brain of the system. It intelligently manages all electrical supply, demand and charging for 12 Volt and 240 Volt.

It will seamlessly switch from supplying 240 Volt from a site hook-up to supplying an indistinguishable supply from the on board Lithium leisure battery. Even sensitive electronic systems continue to run oblivious to the change.

It manages the different charging modes for optimum charging and will use mains supply or, solar power to keep batteries in tip top condition.

## Cerbo GX touchscreen

An intuitive control system is essential for the end user and our favourite interface is the Cerbo GX touchscreen. It provides helpful and easily understood information and control for those happy to let the system manage itself. It also allows for detailed and granular control over charging modes and power balancing for those who want it.

## Monocrystalline panels

The final piece of the jigsaw for off-grid living are solar panels. These exceptionally lightweight, efficient and thin panels flex enough to fit perfectly to the Sprinter roof. Their unique multilayer construction with a top layer of ETFE plastic keeps them exceptionally clean and effectively self-repairing, due to their high resistance to corrosion and weathering.

You have the option to add additional solar panels to provide a maximum solar charging capacity of 420W.

We always provide a thorough handover and support resources so every new owner leaves confident and competent to make the most of their new Rebel AWD.

# Rebel Twin habitation layout

## Additional travelling seat

An optional additional travelling seat can be added to the rear when the twin lounge configuration is selected. It folds flat to sit below the level of the rear seats so the bed can be made up over it or it can be removed completely and just used when needed.

It includes a built in three point seat belt and ISO fix for even greater flexibility.

## Full size bed lengths

All rear sofa configurations provide the same bed dimensions. To maximise everyday living space the sleeping length has been extended under the overhanging kitchen work surface and cupboards. This provides a twin bed length of 1910mm x 660mm and 1780mm x 660mm. When made up as a double the width is 1720mm.

## Multiple table locations

There are multiple table sizes with the Rebel to give you the most flexibility in how you use your space. A larger rear table gives you plenty of space for social gatherings or you can use the smaller square table for two. The front cab rotating table gives a versatile alternative. All can be mixed and matched to suit your preferred use inside or even outside with the included table tripod.

# Rebel U habitation layout

## Expanded storage options

In addition to the overhead and cupboard storage, the U lounge layout offers additional rear accessed storage that's the perfect spot for any dirty recreation items you want out of sight, but not making a mess. New for all our range in 2024, doors, drawers and overhead cabinets have soft close, self-latching mechanisms, providing a flat smooth surface so there's no chance of snags or spills.

## Ergonomic bathroom space

The bathroom space for all RP Motorhomes has been redesigned to maximise space and flexibility. A beautiful new Corian® sink sits neatly against the wall until needed, giving maximum space for showering. Once lowered it is reassuringly solid with a large basin that fills from a concealed waterfall mixer tap. Simply fold it back into position to empty the basin.

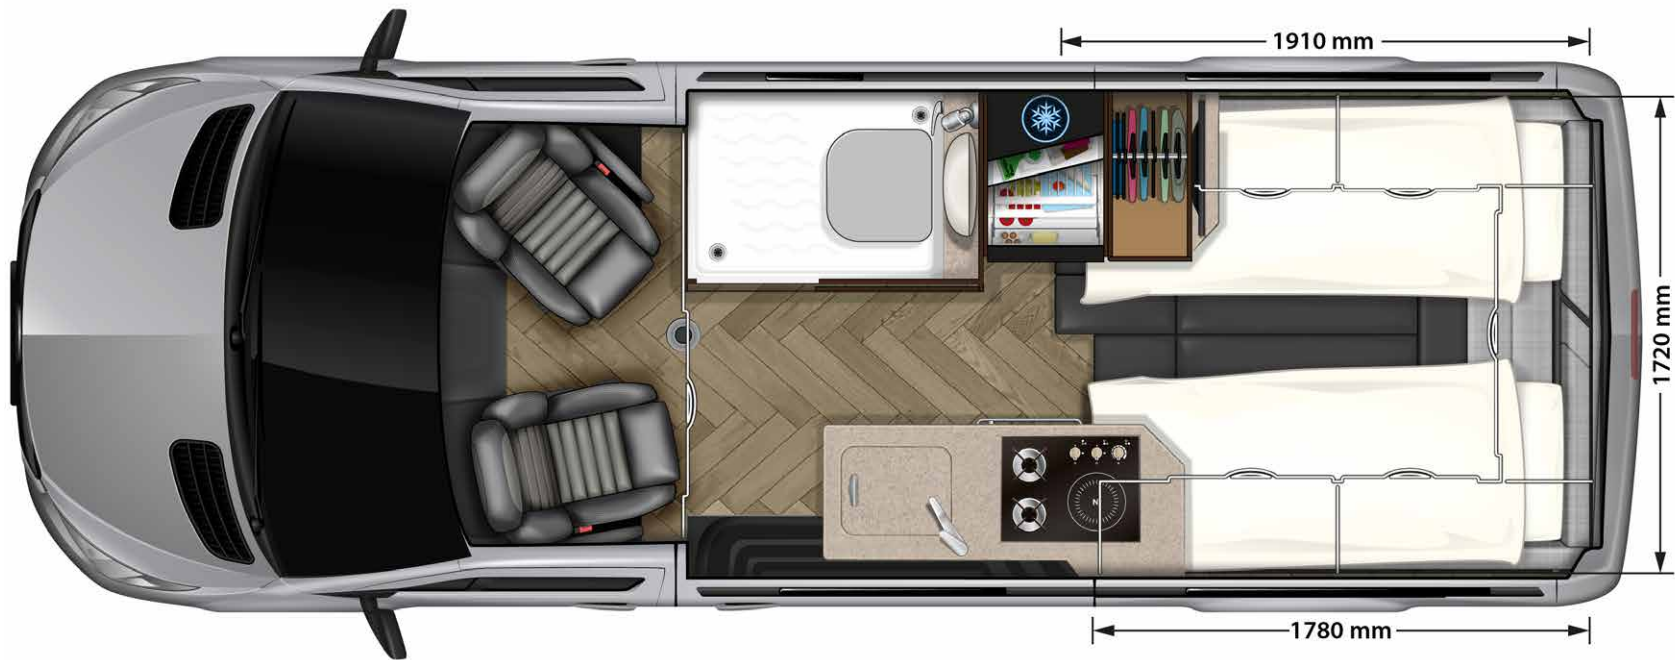

## Flexible cooking and preparation area

The fold up surface extension provides useful additional space for food prep or draining using the built in drainer grooves in the sink cover. The Dometic MWO 240 microwave is an optional extra providing defrosting, 5 cooking levels and a ceramic hot plate. It fits in a safer lower location replacing a cupboard below the sink.

# Rebel sleeping habitation layout

## Sleeping configuration

All habitation layouts are easily converted to a large sized double with pull across frames built into the seats. The daytime cushions are simply rearranged and fill the gaps perfectly.

## Optional composting/separating toilet

The layout above shows the size and position for the composting/separating toilet. This is an excellent optional extra to consider if you're planning extended periods away from connected site amenities as it avoids damaging the natural environment emptying hazardous chemicals. Designed to be removed to provide a fantastic full sized shower space is a luxury in itself. When installed in the bathroom it is securely fixed and connects to an active venting system to eliminate any possibility of odours.

OGO Composting Toilet

An environmentally friendly solution that no longer involves harsh chemicals and being tied to site disposal points.

The OGO™ Compost Toilet design offers seamless separate liquid and solid waste management. Waterless and energy efficient, OGO™ provides the most features to ensure an easy transition to going off grid.

- Electric agitator for efficient solid waste composting
- Patented urine separating trap door
- Liquid level sensor
- Easy to empty solids bin
- Fan assisted venting to maintain ideal composting conditions with no odour
- Low 12V power draw for fan and motor
- Easy clean compact modern design

OGO™ allows for 25-30 uses before emptying the solids bin. Polypropylene Calcium Fill exterior, and HDPE (High Density Polyethylene) for the interior with durable pieces and parts, creating a product built to last.
